

# Need to trace your Trailers?

**TrailerTracker™** - An innovative, **low-cost, non-powered, add-on module** to EDT's SmartLog device will help you trace your trailers every where

**No Power Required**

**No GPS / GPRS Required**

**Low-Cost, SmartLog Add-on module**

Left: Tracked Trailer using TrailerTracker™

Right: The non-powered Trailer ID™ installed in the trailer transmits its ID to the Smart Log unit installed in the Tractor.

EDT's Smart Log (GPS based AVL device) is equipped with a RF Modem which detects the ID of the Trailer's add-on module

EDT announces the release of its innovative **non-powered** Trailer Tracking device (the TrailerTracker). This is the first time Trailer Tracking is done using an add-on module to an existing, GPS-based, Vehicle Tracking device and not as a stand-alone Trailer Tracking solution. **As such, end-user price is far below any stand-alone GPS-based unit.** The add-on module is interfaced with EDT's SmartLog - Online GPS-based, AVL and Mobile Productivity tool. Using the end-to-end hardware & software suite, composed of EDT's SmartLog, TrailerTracker and WebFleetLog, fleet managers may now benefit from an ultimate, online, fleet and trailer tracing & management solution

## The need

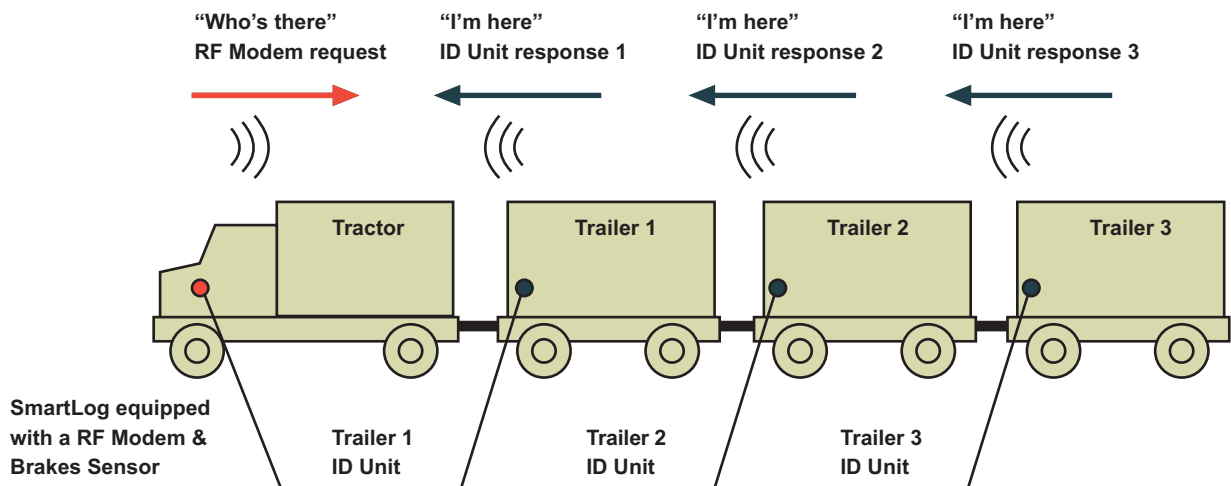

Trailer Tracking will help you run your fleet of trailers more efficient. It will inform you about the exact usage of your fleet of trailers. Besides this it brings you information about the exact location, both parked as well as towed, of your trailers.

The intelligent way of obtaining information from your fleet of trailers is displayed in EDT's WebFleetLog software. The software is accessible through the internet and therefore allows easy view from every location with internet access.

The reports will not only provide you with trailer information but also information about the truck and efficiency-rate of your drivers.

Insurance companies are granting discounts on their premiums because of the reduced risk of theft.

## How does it work?

Upon activating the truck brakes, a request is sent to the Trailer ID installed in each trailer to identify itself. Once the ID is transmitted to Smart Log (installed in the Truck) the ID of the Trailer ID, along with its GPS-based location, are sent to the office using GPRS transmission

### TrailerTracker operation

## Online display of trailers

EDT's Web Fleet Log (Fleet Management Software) is used for online display of the trucks and trailers. Web Fleet Log points at the exact location of trailers which are not connected to a truck. You'll be able to quickly direct a truck to one of the disconnected trailers.

## Reports

Contain data related to:

- Last towing truck license plate
- Towing drivers' ID
- Last known location of a trailer (including cities, streets, zip codes)
- Distance traveled by the trailer
- Route traced (locations visited)
- Time, Destination, Date

15 Keren Hayesod St. P.O.B 2035, Tirat-Hacarmel, 39120, ISRAEL
